Rope Watcher™

Product information

Rope Watcher is a permanent device that keeps the rope under constant control and provides indications about its wearing status. It detects internal and external faults on the rope by means of the magneto-inductive method (MRT), which is nationally and internationally regulated.

This cutting-edge product allows:

- 24/7 remote rope monitoring;
- real-time rope scanning;
- scheduled and on-demand replacement of the rope;
- safety and operational continuity boost;
- alert in case of excessive wear
