

Suspension Relief Straps Skylotec

Product information

The thought behind the suspension Relief Strap is to create more time for rescue and evacuation and lessen the pressure on the body after a fall.

The straps are pulled out and put together after the fall and then creates a loop that the user can stand in. This to lessen the pressure from the fall arrest against the body and thereby decrease the risk of loss of blood supply to the rest of the body.

Material: Polyamide, Steel
Marking: CE-marked
Temperature range: -35°C up to 45°C
