Twistlock

Product information

Container twistlock is a mechanical locking device used to secure shipping containers during transport and stacking. It connects containers to each other or to transport platforms such as trailers, rail wagons, or vessels. Designed for container handling environments, it ensures stable and aligned positioning under dynamic loads.

Best for:

- Securing containers in transport, stacking, and intermodal operations
- Applications requiring standardised container corner casting connections

Product benefits:

- Standard ISO corner casting fit ensures compatibility with container systems
- Mechanical locking mechanism provides secure and repeatable engagement
- Supports fast container handling and reduced turnaround time
- Robust steel construction suited for transport and marine environments
- Available in multiple configurations for different securing applications
