

## Big Bag

### Product information

Bags of UV-treated polypropylene fabric with attached lifting band off polypropylene. Big bags have great advantages compared with small bags, save time and work, especially when filling and discharging. The assortment covers both single - and multiple-use bags. We can offer 1,2 and 4 loop bags. The 4-loop bags are also available for dangerous goods, antistatic and hygiene purposes. All models can be delivered with inner bag or in treated fabric in order to prevent absorption of moisture.

**Filling:** You can fill the bag by either using a filling spout or directly in the open bag depending on the filling material's characteristic.

**Discharging:** You can discharge the bag by either using a discharge spout or by a full opening bottom. You can choose the discharge spout diameter and length depending on the filling material's characteristic.

**Handling:** The bags get a square shape after filling which make them safe to handle and simple to stack also during difficult condition. The bags are handled hanging or on pallet with a lift truck. With one lifting loop in each corner the bags becomes simple and safe to handle when loading on truck/railway and ship/container.

**Accessories:** CERTEX manufacture different lifting beams for big bags, for single or multiple handling.
