

Automatic Lubricator

Product information

General: For Elevators, Escalator Chains, and Selector Tapes. Keeps cables constantly lubricated thus increases cable and sheave life. Features adjustable oiling rate-wick lock, adjustable wick length and a top fill external level indicator. Lubricates by electrostatic attraction - which means only minimum wick adjustment necessary after installation. For proper model selection, measure distance between outside wires and add 25 mm.

Important: The device needs to have a solid ground connector to the machine.
