Ropecheck Tool Verope

Product information

The Verope Ropecheck system is a combined inspection tool and digital application designed for evaluating the condition of steel wire ropes in service. It supports maintenance teams in measuring key rope and sheave parameters while documenting inspection results digitally.

This system is used when regular rope inspections must be recorded, assessed, and reported efficiently in lifting, crane, and industrial rope applications.

With this tool you can easily check:

- Rope diameter
- Sheave opening angle
- Sheave groove diameter
- Depth of sheave
- Depth of drums
- Wire breaks

When to choose this product

Best for:

- Routine inspection of crane and lifting wire ropes with documentation requirements
- Operations requiring both physical measurement and digital reporting

Not ideal for:

- Situations where a full inspection must be carried out strictly independent of digital support tools (does not replace ISO-compliant inspection)
