Horizontal Rail Lifeline System Skylotec SKYRAIL

Product information

SKYRAIL is a horizontal rail fall protection system designed for continuous attachment during work at height. The aluminium rail system allows users to connect their personal fall protection equipment to the SKYRAIL RUN runner and move along the rail without interruption. It supports maintenance and rope access operations in areas with fall hazards.

Best used for:

- Fall protection on flat roofs, stadium roofs and loading facilities.
- Maintenance and rope access work on crane runways and wind turbines.

Product benefits:

- Continuous rail guidance enables movement without repeated disconnection.
- Floor, wall or ceiling mounting accommodates different installation requirements.
- Aluminium rail construction with a 6000 mm length supports extended access routes.
