Vertical Fall Arrest System Skylotec CLAW LINE

Product information

CLAW LINE is a vertical steel cable fall protection system designed for secured climbing on ladders, masts, towers and other vertical structures. Its corrosion-resistant stainless steel construction supports use in demanding onshore and offshore environments, while the compatible CLAW rope runner incorporates safeguards against incorrect attachment and removal.

Best used for:

- Vertical climbing protection on masts, towers and fixed ladder structures.
- Onshore and offshore wind energy installations exposed to corrosive environments.

Product benefits:

- Stainless steel construction provides corrosion resistance in demanding environments.
- Flexible installation supports adaptation to different vertical structures.
- Compatible CLAW runner features an actively unlockable locking pin to prevent incorrect attachment.
- 8 mm steel cable supports vertical installations up to 100 m for one user
